

FUELTEK HELP MORE COMPANIES 'Make their fuel go further'

Stephen Fagan of Fagan & Whalley said " *The installation of the Fueltek system has been a complete success, we are getting exactly what Fueltek claimed we would get in terms of security and control. The software is simple to use yet gives in -depth analysis of all fuelling activity. We are currently using fuel cards for offsite fuellings and the system is able to integrate this information to give a complete fuelling picture, we are very happy with our choice of system supplier.*"

Mike Pendleton of **Holmeswood Coaches** installed a Network of Four sites using the **Fueltek FT4000**. All sites communicate via GSM Modems with the **Fueltek FM** Software located at Holmeswood Coaches Head office in Holmeswood. **Mike Says** "I am very pleased with the Fueltek system. The system has been installed for nearly 12 months now and has proved to be reliable and trustworthy. With the Fueltek System we now have full control over our fuel stocks and can identify real cost savings".

Roger Brown, Group Fleet Manager, White and Company PLC, a National and International Removals and Storage Business.

"We installed Fueltek equipment on 13 of our sites, located throughout the UK and as far apart as Forres, north of Inverness and Plymouth in the South West. The hardware installed on each site reports back to our fleet office in Southampton via GSM to enable us to monitor and manage the fuel usage on each site centrally. Also, fuel transactions using fuel cards are input to the system, this gives a record of all fuel transactions taken by company vehicles. We have been very happy with the service provided by Fueltek. The equipment has proved to be reliable, the software and reporting package is user friendly. The information we get from the system is relevant and informative and the after sales service provided is very good. We would have no hesitation in recommending Fueltek to any other organisation".

Simon Hackney of National Veterinary Services. STOKE - ON - TRENT

Fueltek have provided us with fantastic products and a fantastic after sales service, we installed a complete package comprising a 54,000 ltr Fuel tank, two Fuel Pumps with integral fuel management systems, tank contents gauging and alarms to prevent overfills. When we purchased the system we expected our pay back time to be about 18 months, we recovered the costs in about 13 or 14 months. Fueltek have provided us with a very professional level of service, from the initial sales visit and specification of the system, through the installation process to after sales care and the level of support they continue to provide. I cannot speak highly enough of Fueltek and would recommend them to any company considering purchasing this type of equipment.

Sunderland City Hospital - Sunderland - Shaun Parkin

The Fueltek System is Trouble Free and provides useful information, no problems at all, it is a very good system.

Lynch Plant Hire - Wembley - Fabian Swampillia

We installed the Fueltek system many years ago, the Fueltek System has proved very reliable. The environment on our site is very harsh, we had experiences with previous systems that were unreliable and fell into disrepute. The Fueltek System has proved more than capable of meeting our demands and we have saved money by having the system in place.

Pat Munro (Alness) Ltd - Brian Munro

The Fueltek System has benefited the economics of our company. The system has proved to be very useful and informative. Everbody at Fueltek is most helpful. We are very happy with the Fueltek System and the after sales service

East Lancs Warehousing is a national operator and is part of the Weaver pallet express group. Fuel and its management is a very important issue to ELW. To enable efficient on-site fuelling they chose to install a FT2000P which is an integrated fuel pump and fuel management system.

The system uses proximity tags for access to the fuel, all transactions are stored at the fuel island and downloaded when required to the Fueltek FM software package. ELW required the software and reports package to be multi-user and accessible from a number of PC locations within their organisation.

Ian Maudsley of ELW said *"The installation of the Fueltek system has been a complete success, we are getting exactly what Fueltek claimed we would get in terms of security and control. The software is simple to use yet gives in depth analysis of all fuelling activity. We are currently using fuel cards for offsite fuelling and the system is able to integrate this information to give a complete fuelling picture, we are very happy with our choice of system supplier".*

User Friendly, Reliable, Cost Effective Fuel Management Systems
